# Argos

XXL PORCELAIN

## ¿Porqué?

---

Argos es un innovador producto fabricado con materias primas naturales que ofrece unas propiedades mecánicas y estéticas superiores a las de cualquier material de recubrimiento convencional.

Argos es el resultado de años de investigación y desarrollo. Gracias a la evolución de la tecnología de la extrusión, hoy es posible producir piezas de dimensiones 1200x3000 mm y de 12 mm de grosor, que mantiene las propiedades mecánicas y estéticas del gres porcelánico. De esta forma se amplía el ámbito de aplicaciones del porcelánico, ofreciendo grandes posibilidades de innovación en el campo de la construcción y del interiorismo.

La pieza porcelánica por extrusión Argos de gran formato, elevada resistencia mecánica e inalterable al calor, al hielo y a los agentes químicos, resulta ideal para recubrir cualquier tipo de espacio: alto tránsito, fachadas, instalaciones sanitarias, rehabilitación e interiorismo (encimeras, mesas y armarios).

## Why Argos?

---

Argos is an innovative product made from natural raw materials with exceptional mechanical and aesthetic properties that surpass those of any conventional tiling material.

Argos is the result of years of research and development. Thanks to evolution of pressing technology, it is now possible to produce a 47,24" x 118,11" porcelain tile and 0,47" thick, while still maintaining the mechanical and aesthetic properties characteristic of porcelain tile. This broadens the scope of porcelain, offering great potential for innovation in the fields of construction and interior design.

Porcelain tile by extrusion Argos of large dimensions and reduced thickness, high mechanical strength and immune to heat, ice and chemical agents, making it ideal to cover any kind of area: heavy transit areas, facades, medical facilities, refurbishment and interior design (kitchen countertops, tables or cupboards).

## Pourquoi ?

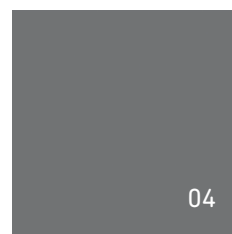

---

Argos est un produit innovant, fabriqué à partir de matières premières naturelles, qui possède des propriétés mécaniques et esthétiques supérieures à celles de tous les matériaux de revêtement traditionnels.

Argos est le résultat d'années de recherche et de développement. Grâce à l'évolution de la technologie d'extrusion, il est aujourd'hui possible de produire des pièces de 1200 x 3000 mm et de 12 mm d'épaisseur, qui conservent les propriétés mécaniques et esthétiques du grès cérame. Cette évolution permet de diversifier les possibilités d'utilisation des carreaux de porcelaine, ce qui ouvre de grandes perspectives d'innovation dans le domaine de la construction et de la décoration d'intérieur.

Le carreau de grès cérame extrudé Argos de grand format, qui possède une résistance mécanique élevée et inaltérable à la chaleur, au gel et aux agents chimiques, est idéal pour le revêtement de tout type d'espace : trafic intense, façades, installations sanitaires, rénovation et décoration d'intérieur (plans de travail, tables et armoires).
